

AIR TECH  
SYSTEMS

Parameterise LTG units with your  
smart phone – with LTG's app "NFC Assistant"!

## Power-off, quick and safe due to NFC interface

Our bus-compatible VAV series **VRactive System ActiveControl** and **induction units HFVsf** are now available with a NFC interface – with many advantages for you:

Quick-check and parameterise VAV units easily with an Android smart phone and **LTG's app „NFC Assistant“**. Hold your smart phone on or near the VAV unit controller to display the set and actual values, as well as damper position. Modification of the operational air flow volume can also be made with the app – easily and within seconds.

Concerning induction units HFVsf, the nominal water mass flow, CO<sub>2</sub> actual value or the fresh air flow rate can be analysed and displayed; the CO<sub>2</sub> given value can be edited.

**LTG's app "NFC Assistant" – easy, power-off and safe.**

Benefit from these advantages! "LTG NFC Assistant" is available at [Google Play Store](https://play.google.com/store/apps/details?id=com.ltg.nfcassistant) now! Do you have any questions? Please do not hesitate to contact by e-mail: [support.nfc@ltg.de](mailto:support.nfc@ltg.de).
